**Workshop Overview:**

Hybrid Electric Vehicles (HEVs) are the vehicles that combine the benefits of engines & electric motors and can be set-up to meet various objectives such as improved fuel economy, increased performance or additional auxiliary power for electronic devices & power tools. The hybrid electric revolution hasn't arrived with the ferocity predicted by futurists the world over, but we can still see some pretty big leaps in range, performance and style with the introduction of new HEVs. It's a promising sign of things to come, which gives customer a wide variety of choices. It's an exciting new segment in the automotive industry and the list of top OEMs for the best hybrids like Audi, BMW, Kia, Chevrolet, Chrysler, Ford, Honda, Hyundai, Infiniti, Lexus, Mercedes-Benz, Nissan, Tesla and Toyota are on the rise. In order to understand this changing face of Automotive Technology, ARAI invites you for a 3-day blended online Proficiency Improvement Programme (b-oPIP) on 'Hybrid Electric Vehicles'.
